The Grand Canyon

The Grand Canyon is located in Arizona. It is 9
277 miles long and one mile deep. A river flows 19
through the bottom of the canyon. Many, many 27
years ago the river cut through the rock and 36
formed the canyon. Today, everyone enjoys 42
rafting on the river. 46

The Grand Canyon contains different kinds of 53
plants and animals. There are willow trees as well 62
as cactus plants. You can find foxes, deer, 70
bobcats, chipmunks, and rabbits. We enjoyed 76
watching chipmunks running and rabbits hopping 82
near the canyon trails. In the summer, it is hot. I 93
think it gets hotter than any other place. 101

People like hiking into the Grand Canyon. The 109
trail is slightly sloping as you go down. I think it's 120
easier to take the mule-pack trip. By riding a mule 130
you will not have any worries about tripping. The 139
rock colors are amazing. I think it's the prettiest 148
place you will ever see. Everyone should see this 157
canyon at least one time. 162
